

## BRANDON JEPPSON

(916) 251-6401 | Brandonjeppson7@gmail.com | linkedin.com/in/bjepp | Provo, UT

# Product Management | Requirements & Discovery | AI-Native Builder

MBA candidate moving from GTM into product. Writes requirements, instruments funnels, and ships tools end to end. Works comfortably between customers, product, and engineering.

## EXPERIENCE

### AI Foundry @ BYU (Student-Run AI Product Studio)

May 2026 – Present

*Founding Member, Head of Product*

Provo, UT

- Product lead on a pharmaceutical client engagement; auditing client evaluation process and translating client needs into a working prototype
- Appointed by faculty as Director of AI for Cougar Strategy Group, embedding AI across its seven-stage client engagement model as shared infrastructure rather than one person's workflow
- Responsible for the studio's BYU product line, scoping internal campus engagements into buildable product work

### Redo (Post-Purchase & Returns Software for DTC Brands)

May 2026 – Aug 2026

*Partnerships, Business Development (MBA Summer Internship)*

Draper, UT

- Scoped requirements with the partnerships manager, wrote a four-page PRD defining pipeline stages, warm-versus-cold triage, and data structure, then built the tracker to spec; it became the team's living record and the precedent for partnerships
- Built and iterated my own research agent, caught it fabricating qualification evidence, then spec'd a code-enforced replacement
- Rebuilt the partner offer after leadership killed the original as unscalable, swapping lead sharing/sourcing for a per-order margin cut on returns the 3PL already ships, and built the unit economics my manager carried to market
- Instrumented the funnel across 90+ accounts by segment, stage, and message variant, and re-cut the qualification gate from company size to customer segment

### Awardco (Employee Recognition & Rewards Platform)

Nov 2022 – Jul 2025 | Lindon, UT

*SMB Account Executive*

Jan 2024 – Jul 2025

- Pilot team on the launch of Awardco's first SMB product, positioning an enterprise-built platform against an ICP the company had never sold and shaping the playbook 21 account executives ran
- Carried client responsiveness on the static V1 back to product managers and engineering through tickets and team review; V2 became the configurability customers kept asking for
- Built my own Salesforce reporting: accounts segmented by industry and the leading indicators of response I identified, plus funnel dashboards tracking conversion by stage and message variant

*Enterprise Business Development*

Nov 2022 – Jan 2024

- Reported to the product manager who owned enterprise product, writing client outcomes as tickets translated into product customizations engineers could build against, alongside that PM and two to three engineers
- Scoped a custom HRIS integration for S. Truett Cathy Brand Restaurants so recognition points would redeem as catalog items on frontline kiosk iPads with a single credential entry
- Built enterprise business cases from ESG reports, 10-Ks, and executive announcements; generated \$1.5M+ in qualified pipeline and \$871K closed
- Carried engineering's feasibility verdict back to the client, including the "no" when a request amounted to a fundamentally different product than the one sold

### Fiddle (Pre-PMF Operations Software Startup)

Jan 2022 – Oct 2022

*Founding Account Executive*

Provo, UT

- Ran 150+ customer discovery calls as the founding seller and built the tracker behind them, synthesizing which value propositions earned traction and documenting the process for the next hire
- Reported customer signal directly to the founder-CTO through a shared system he used to prioritize the roadmap, from the same room as the two engineers building against it

## EDUCATION

### Brigham Young University, Marriott School of Business

Graduation: Apr 2027

*MBA, Marketing & AI Integration | Product Management Leadership Team*

Provo, UT

### Brigham Young University

Graduation: Dec 2021

*Bachelor of Humanities, American Studies | Minors: Global Business, Scandinavian Studies*

Provo, UT

## PROJECTS & SKILLS

**Projects:** Thrift Scout (autonomous sourcing agent) · Walnut (local speech-to-text tool) · aifoundry.byu.edu — built end to end: own code, Supabase backend, Vercel deployment, live users

**Skills:** Product requirements & PRDs · Customer discovery · Funnel instrumentation & analysis · Salesforce · Jira · SQL (working familiarity) · TypeScript/Python · Supabase · Vercel · Next.js
